Introducing the first sodium-based HV home storage system

Revolta

Safer with sodium: 100% lithium-free home storage

While most residential energy storage systems available today rely on lithium-ion battery cells for their high energy density, sodium-ion technology offers a fundamentally safer alternative – and we'll soon be bringing it to **you and your customers' homes.**

Flexible & easy to install

Simply connect up to ten battery modules (2.0 to 20 kWh), then connect the Control Unit and inverter. Thanks to the flexible arrangement of the modules, the system can be optimally adapted to the available installation space and the specific site conditions.

Curious?
Don't miss out:

- ✓ **Enhanced safety:** lower risk of overheating or thermal runaway
- ✓ **Optimal performance:** higher energy yield and temperature resilience
- ✓ **Easy handling:** compact and lightweight design
- ✓ **100% lithium-free**
